

Innovation Report

By: Hadassah Meikle

The technologies that I learned about in this class such as HTML and more offer major innovation to Library and Information Services. Librarians that have knowledge in HTML, CSS, JS, Github and other technologies learned in this class have a distinct advantage over other librarians. They are equipped with practical and useful computer related skills, which can save a library from having to hire additional IT support.

Library and Information Service workers with knowledge in the use of the technologies learned in this class, will be able to create simple and effective webpages for the libraries that they work at. Libraries are hubs of information, so it is only natural that Library and Information Service workers learn about internet application such as HTML, CSS, JS, Github and other technologies learned in this class.
